## HIGH TEMPERATURE LUMBER DRYING SYSTEMS

**For 15,000 BF to 350,000 BF---** More than thirty

years ago, NYLE invented the high temperature lumber drying system that for the first time enabled dehumidification kilns to operate at up to 160°F (72°F) and match the drying speeds of most conventional kilns as well as allowing easy pitch setting and sterilization. In the more than three

decades since, NYLE has focused on constant improvement in technology to assure years of reliable and efficient operation. NYLE saves energy, reduces capital and operating costs while making drying simple and allowing even inexperienced operators to produce the highest quality lumber, improve yields, all while running the most environmentally **Green** system.

NYLE systems are made in the USA by --
