

Firewood Processing

Nyle has built scores of heat treating kilns for firewood. Nyle units are sold as turn-key systems including chambers, or customers select just the equipment they need for installation in customer supplied chambers.

Nyle has developed a control system that is easy to run, can adapt to the ever changing requirements of heat treating lumber and is completely expandable.

Nyle's Chambers & Flexibility

The chambers Nyle builds are rugged and built for a long and efficient life. They are designed for fast loading and unloading and have high insulation values to reduce operating costs. The extra width of these chambers also dramatically improves airflow and shortens processing time.

If you have your own chamber, Nyle can provide detailed plans. We have converted old milk coolers, tractor trailers, shipping containers, rooms in existing buildings and free standing structures made of everything from wood frame to concrete to steel and aluminum.

Nyle's flexibility is unmatched. Whatever is best suited to your specific operation can be provided by Nyle and will be built to last right here in Brewer, Maine.

Nyle's Unmatched Experience & Service

When you buy a kiln from Nyle, you are not only buying the equipment but you are also buying the support. Nyle has been designing and building kiln systems for over four decades. Thousands of Nyle Systems are used all around the world, drying all sorts of lumber for use in every conceivable way. In this process Nyle has developed a great deal of knowledge in our field.

Our systems are designed and manufactured in-house from our facility in Brewer, Maine. Every system comes with service and support from the professionals who build them.

Heating Options

Nyle offers several types of heating options. Depending on your location, one may be better suited for you than others. For example, costs for electricity in your area might be lower compared to the average, or your area might have more strict regulations on emissions. This is why we offer several types of heating

- Hot Water Heat
- Steam Heat
- Electric Heat
- Indirect Fired Gas Heat
